Evening Brief

Date: Sunday August 20, 2017

Weather Summary

High Risk for Lightning Central and Eastern Idaho Wednesday

Strong Winds/Drier Air in Idaho/Wyoming Thursday-Friday

Generally dry conditions with warming temperatures will continue across the north through early this week. Moisture in place across the southern Great Basin will generate daily afternoon thunderstorms thru early this week, especially over the higher elevations of Utah and over central and southern Nevada, spreading north towards Idaho. Locally breezy winds of 15-25 mph this afternoon for parts of SE ID and Western WY along with low humidity.

An approaching low pressure system out of the Pacific NW will draw moisture into southern Idaho/Western Wyoming for the second half of the work week for isolated to scattered showers and thunderstorms, especially over the higher elevations of central Idaho. **High Risk for Lightning** has been issued for these areas.

An additional concern will be stronger winds moving into northern areas after the lightning. Even though temperatures will be cooler behind the cold front Thursday/ Friday, humidity will be lower and westerly winds of 15-30 mph are possible.

Strong high pressure builds in across the Western Great Basin, with near record heat Saturday, spreading eastward through the weekend.

Preparedness Levels

Great Basin	3
National	5

Great Basin Fire Activity (from Irwin): Moderate Activity

New Fires and Acres: 30 fires for 1497.06 acres; 4,954 acres large fire growth; 1 new large fire

Resources:

- Crews: 9 T1 IHCs in GB: 7 committed, 2 Available.
 - GBCC has committed an estimated 29+ Type 3, 4, 6 engines.
 - 5-T1 and 9-T2 helicopters are available in GACC.
-

Great Basin Fire Potential Summary

Fuel across much of the area are slowly drying and recovering from the monsoonal moisture earlier in the summer, with fire danger values at or below normal for the time of year. Continued dryness across the north will allow fuels to further dry for increasing large fire potential. An increase in southerly

moisture will help to keep fire potential moderated across the south and east through the period. However, the mountains of Central Idaho have drier than normal fuels and will be the most likely area for new large fires later this week with both the lightning and winds.

We continue to have a Great Basin Fuels and Fire Behavior Advisory in effect for Nevada, Idaho and Utah, available at the following link:

https://www.predictiveservices.nifc.gov/fuels_fire-danger/GB_Fuels_and_Fire_Behavior_Advisory.pdf

Current Incident Details

Today's Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. Of Origin Sage Grouse Habitat
